

Bakery Initiatives (BI) is a solution for development, design, engineering and building bakery projects in evolving markets. The concept is an initiative of two well reputed Dutch business partners: Van der Schoot Holding BV and ACC Business Creation BV.

Van der Schoot Holding BV has its roots in consulting, engineering, design and installing bakeries and bakery projects. They are market leader in this category. Another company of the group is the 1st e-commerce driven intermediate for used bakery equipment. (www.dubet.com)

ACC Business Creation BV (www.accbc.nl) has over 20 years of experience in design and management of agribusiness projects all over the world.

Bakery Initiatives wants to be the venture partner for entrepreneurs in the bakery sector in emerging economies. In close cooperation with local entrepreneurs, BI builds and operates entire bakeries. From opportunity search to targeting, engineering, building of the projects in the start up stage. Also management and support can be supplied during the initial kick off stage, if needed. BI knows the ways and sources to attract venture capital to finance the investment plans. And how to allocate and mobilise grants and subsidising opportunities.

Bakery Initiatives stands for the BOT-approach: **Build, Operate and Transfer**. BI builds the bakery project; operates the project for a certain time, normally up to one (1) year taking responsibility for all operations and quality control and then transfers operational control to the local investors.

What can BI do?

Bakery Initiatives is a young company but its owners have a long experience and track record in bakery projects. Van der Schoot Holding BV executed bakery projects in Holland, Belgium, Germany, Switzerland, Austria, Poland, Serbia and Malta. ACC Business Creation BV has developed several agribusiness projects in Africa, Central Asia, Eastern Europe and Latin America.

Through the experience of its owners, BI can offer the following goods and services to joint venture projects in bakeries:

- Comprehensive feasibility study and business planning;
- Preparation of bankable documents;
- Matching with foreign investors, market parties and buyers;
- Matching with financing institutions such as IFC, FMO, EVD, EBRD, Norsad;
- Attract venture capital;
- Supply technical know-how and equipment;
- Train management and technical staff;
